Satisfaction ByFrequency

Geographic Distribution of Satisfaction

- Insight:** Cities like Austin, TX and Phoenix, AZ report higher satisfaction, likely driven by key factors such as Product Quality and Customer Service,
- Insight:** Interestingly, low loyalty customers show higher satisfaction than high-loyalty ones suggesting early delight doesn't guarantee retention.
- Insight:** Repeat buyers show higher satisfaction levels, while contacting support shows minimal impact, with satisfaction nearly equal for both groups.

%High Loyalty by Customer Type

- Insight:** Younger customers (especially males) tend to be more loyal, while older segments show significantly lower high-loyalty percentages across both genders.
- Insight:** Repeat customers show lower loyalty than one-time buyers suggesting early satisfaction does not always lead to long-term retention.
- Insight:** High-frequency shoppers demonstrate higher loyalty levels compared to moderate-frequency buyers, highlighting the impact of consistent engagement
